

# ARTIST MANAGEMENT SYSTEM

## Project goal:

The purpose of this project is for you to exercise on your newly learned topics such as SQL, JDBC and core java. you have 3 days to complete it.

## Project description:

**Object type:** Artist

**Attributes:** id, name, lastName, age

**You are supposed to create methods to:**

Add

Delete

Update

Show All

FindById

**Optional:** FindByAge , FindByName

**Step 1:** Choose your database type (JavaDb or MySql) and add to your project the appropriate driver.

**Step 2:** Create your table

**Step 3:** Create your main menu

**Step 4:** Create your methods to serve your menu

For Example: `public Artist findById(int id){`

*Takes an id and with help of JDBC finds the student in database table and returns it as an java object.*

*HINT: Google how to create parameterized queries.*

`}`
